Details on door locking system are available

Heavy duty cylindrical camera cages are available to suit the column

Removable top gives access into cage

Climb guards available

Heavy duty 400 Sq. cabinet  
10 thk door & case  
8 bolt fixing

Heavy duty 500 Sq. double skin cabinet  
10 thk outer door & case  
Inner door 4 point locking  
8 bolt fixing

Ram raid base  
for use with AV or AVR  
8 bolt fixing

A minimum soil bearing pressure of 75 KN/m<sup>2</sup> is assumed

## Installation Method

1. From the map, select location of installation
2. Excavate as per recommended area and depth
3. Assemble root base as shown in fig. 1
4. Insert root base into the hole ensuring that it is level and that the four studs protrude 60-70mm above the concrete foundation
5. Fit the cable duct if routing via the interior of the column. A plastic pipe of approximately 100mm outside diameter is recommended for this. Ensure this protrudes through the template by 50mm minimum.
6. Pour concrete ensuring that it is a mix of C35 to table 6 BS 8110 and then tamp down well
7. Fit the setting template over the four protruding studs, double-checking that they are level and that clear access can be gained to the cable duct if it is being used
8. Leave the concrete to cure for a minimum of 72 hours prior to attempting to erect the column
9. When fitting the column, ensure that the concrete base is in complete contact with the underside of the column and grout accordingly. Torque the nuts to 230-270 Nm (175-200 fl. lb.)
10. When the column has been fitted, protect the studs with a suitable protective coating. Denzo tape or similar is recommended for this

Foundation sizes are determined for three sets of wind speeds, which will cover most of the British Isles.

Area A = 44m/s (98mph)  
Area B = 48m/s (107mph)  
Area C = 52m/s (116mph)

Maximum gust speed is likely to be exceeded on average once every 50 years at 10m above the ground in open level country.
